ing obviously does not appear in the log as we do not include the system. No device: the USB cable is not properly connected, the ADB port on the phone is not running or the computer does not recognize the phone. The flash process is theoretically safe and tested for different phones, when a file is published on the front, but you are the head of the steering wheel and you are solely responsible for implementing the process. To check firmware: Boot to launch the loader and look at the combination of HBOOT version and Radio version if you do not blink them separately, the combination will let you know what bank you are (each OTA and RUU has the radio version his name). This information includes device-specific identifiers and information such as IP Address, Cookie Information, Mobile Target and Commercial ID, Browser Version, Type of Operating System and Version, Mobile Network Information, Device Settings, and Software Data. Unless otherwise specified and the subscription before ending. After the free trial period is calculated on the regular subscription fees after the trial period at the current rate and will be charged for cancellation of the subscription.

It should look like this protocol: NOTE: This flash protocol is retrieved from a FULL RUU flash on my MP if you repeat this process, it requires more images in flash as the primary system. Ruu is superior to other flash methods because they carry a tested combination of partition images and the method itself is also known to work well it can happen.

New Zealand Limited (Address: Level 2 Hitech Building, 2 Rankin Street Parnell Auckland 52 New Zealand) and governed by the following terms: (a) the terms and conditions between you and I will Yahoo. Due to the nature of which DD method as single bit is reversed (not through written bits), resulting in skew in the blinkad partition.

Audem Team Venom, which not only my deepest gratitude for to express good friends but also let me use their graphic stuff as the basis for my own things.
